## Calendar Query Proposal

### What questions are you planning to focus on?

How much time do I spend per week doing school work, internship prep, and lacrosse-related activities?

How much time do I spend on leisure versus productive activity?

### Describe two visualizations (type of plot, coordinates, visual cues, etc.) you imagine creating that help address your questions of interest.

Scatterplots and bar charts

### Describe one table you imagine creating that helps address your questions of interest (what summary statistics will you present? what will the rows be? what will the columns be?).

Pie charts

A leisure table including variables like screen time and socializing variables.

I will measure in hours.

I would like to discover if my days with less scheduled are filled with more unproductive leisurely activity.

### Do you have any questions for me as we get started with this project?
